Education

AISSMS Institute of Information Technology — Pune, India
B.Tech in Electronics and Telecommunication Engineering — *2025 – Present*

- GPA: 8.05 / 10

Experience

AI/ML Cohort Member — Pune, India
Catalyst Tech Club — *Current*

- Selected as part of the college AI/ML cohort focused on applied machine learning, EDA, and project-based learning.
- Attended technical sessions and contribute ∼40 hours/week toward self-learning and project development.
- Built applied ML and backend-integrated projects to reinforce concepts learned through the cohort.

Projects

WalkSafe | *Python, FastAPI, Flutter, Docker, Valhalla, OSMnx, PostGIS, H3, Shapely, ngrok* — GitHub

- Built an end-to-end geospatial navigation system that prioritizes pedestrian safety over shortest-path routing.
- Designed a safety scoring model using OSM features (lighting, sidewalks, road type, speed).
- Implemented a spatial data pipeline with OSMnx, PostGIS, and H3 indexing to store scored road segments and aggregate neighborhood-level safety zones.
- Integrated a FastAPI backend with a self-hosted Valhalla routing engine and a Flutter mobile app: route visualization, live navigation, safety overlays, SOS alerts, and incident reporting.
- Deployed a shareable demo APK via ngrok-tunneled backend for Android testing without cloud infrastructure.

Ignite 2.0 | *Next.js, TypeScript, Supabase, SQL, Tailwind, Framer Motion* — Live | GitHub

- Built a realtime tournament management platform with real-time score tracking, dynamic leaderboards, and a remote-controlled countdown/lock screen powered by Supabase Realtime.
- Engineered live standings with professional tie-breaking rules calculated on-the-fly from Postgres using `postgres_changes` subscriptions for millisecond-level updates.
- Implemented role-based auth (admin/scorer) with environment-driven credentials and a Supabase Auth provisioning script; scorer role limited to Fixtures and Scores tabs.
- Designed a "Dark Stadium" UI system using glassmorphism cards, Bebas Neue typography, and Framer Motion animations; achieved a cohesive premium aesthetic across all mobile viewports.

Machine Learning & Data Analysis Projects | *Python, Pandas, NumPy, Scikit-learn, Streamlit, FastAPI*

- Completed multiple ML and EDA projects on Iris, Titanic, NYC Taxi and housing prices datasets with preprocessing, visualization, and model training pipelines.
- Improved model performance through feature scaling and hyperparameter tuning across multiple ML projects.
- Persisted trained models with Joblib and built a FastAPI + Streamlit interface for end-to-end prediction and visualization.

Technical Skills

Languages: Python, TypeScript
Frameworks: FastAPI, Streamlit, Next.js 14
Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Framer Motion, Tailwind CSS
Tools: Git, GitHub, Linux, Docker, ngrok, venv, PostgreSQL
Concepts: EDA, Feature Scaling, Hyperparameter Tuning, REST APIs, Geospatial Processing, Model Deployment, Realtime Databases, Role-Based Access Control

Additional Information

Comfortable with Git branching, merge requests, and PR-based collaborative workflows.
Familiar with Linux command-line usage, filesystem navigation, and light shell scripting.
Active GitHub profile at github.com/TheGoodDevil00 with ongoing project development.
